Personal Statement

To whom it may concern

I am experienced technical lead/architect/manager who went all way from developer and I know what it takes to build software, enable team work, build infrastructure for development. I was appointed as Head Architect what proves I was doing right decisions at company I am working for. At same time I have a lot of experience in organizing team work, analyzing and defining both functional and non-functional requirements.

I am used to work in distributed environment (headquarters in Sweden, main development office in Lithuania) where English is main language of communication.

Most of my experience is with GIS systems, but even if I don't know some area I am fast learner and will fill gaps fast.

I am generalist (opposite to specialist) and believe this helps me to see big picture and long term trends, suggest solutions that make break-through changes. I like environment where I can solve non-trivial problems and do not sink in routine tasks.
