### About the assignment:

#### Location

Helsinki, Finland

#### Rate (after tax)

€1000 - 2000/Month

#### Duration

Short-term project (>3 months)

#### Extension (project)

Yes

#### Remotely (optionally)

Yes

#### Expire On

2021-01-31 (1 hour from now)

### Description:

Hello,

We are MEB, a printing company located in Helsinki, Finland. Our goal is to have the best ecommerce site in our industry in Finland, paired with our excellent service in physical shop locations. Once the service concept and webshop works profitably in Finland we will expand to Europe.

Last year we released our current web shop <https://meb.fi/>. It is Magento 2 Open based and highly customized for our needs. We have to remember that our products have deep structures (lots of variables) and that separates our shop from a common retail shop which is based on simple SKUs alone.

Our shop works but it is not perfect. We cannot work with the company who did the initial coding so we are looking for a new partner who can continue the development and maintenance of the site. I am the product owner, with basic frontend coding skills.

Are you interested in this?

If you want an example of upcoming development tasks we want to complete:

- Improve loading speed of scripts on product pages: <https://meb.fi/ENG/t-shirts> and also on checkout. This involves not only bundling but perhaps fixing existing script structures. The page is too slow to load (for products with many options).
- Change the current product designer module. See Business Cards and click ADD DESIGN/FILE > Design Online. It's an external design tool which needs to be either developed more user friendly or we change it to another solution from another vendor. The editor has a very simple integration to the product (editor opens the right template based on which SKU combination the user has selected ie. "FLYER-A6" opens the template for A6 sized flyers).
- Dozens of smaller fixes, but nothing too difficult

We require advanced level expertise in Magento 2 and fluent communications (in English). This is not a project for learning by trial and error meaning that we don't want to waste time with band-aid solutions.

Best regards,

Anssi

MEB

## Required Skills

### IMPLEMENTATION

Web Development/programming 5-6 years

PHP

Magento 2-3 years

### PROGRAMMING

SQL 1-2 years

WEB

REST 1-2 years

ROLE EXPERIENCE

Full-stack developer 4-5 years
