Description:

Our client - reputable company in Sweden, is looking for **Scala Developer**.

About the role:

As a Software Engineer you will be responsible for Truecaller's back-end development while providing know how in the full software development life cycle.

Your challenge will be to build a scalable and reliable system, while facing quickly growing global traffic. This will include producing and developing high-volume, low-latency applications for large systems and coping with the challenges of working in a distributed and highly concurrent environment. You will also be coding new features and have an active role in the definition of the backend architecture; which includes designing microservices and researching about new alternatives and technologies together with the platform team.

Required Skills:

As far as your skills, we'd love to hear about your experience of:

- JVM - tuning and optimizing
- Scala, Lightbend stack.
- Play Framework
- Non-relational Databases
- Microservices architecture and patterns
- DevOps and Continuous Delivery

- Good English skills, oral and written

Some other technologies that we use:

- Reactive systems (Akka, RxJava or similar)
- Cassandra
- Apache Kafka
- Kubernetes
- Docker
- Spark
- Cloud computing (Google Cloud Platform)
- Reporting, generating analytics and statistics (e.g. Graphite/Grafana/Prometheus)

Required Skills

PROGRAMMING

Scala 0-1 year
