Description

On behalf of our client, a global leader in digital product development, we are currently looking for a **Senior Data Engineer** to join their innovative and collaborative team. This is a fantastic opportunity for an experienced data professional who thrives in cross-functional environments and is passionate about building scalable, cloud-based data solutions.

About the Company

Our client specializes in designing and delivering powerful, beautiful, and intuitive digital solutions. With a focus on quality and collaboration, they partner with enterprise clients to build products that are technically sound and user-centric. Their work culture values ownership, impact, and continuous improvement, blending engineering excellence with creative problem-solving.

Role Overview

The Senior Data Engineer will play a crucial role in architecting and developing modern data infrastructure, working closely with internal teams and external stakeholders to deliver data-driven value across multiple projects.

Key Responsibilities:

Leadership & Stakeholder Engagement

- Act as a technical lead on projects, collaborating with sales, delivery teams, and clients.

- Take ownership of the technical design and architecture of data solutions.

Data Engineering & Architecture

- Design, implement, and manage scalable cloud-based data pipelines.
- Develop robust data models, SQL queries, and ETL/ELT processes.
- Work with technologies such as Python, Scala, Java, Spark, Databricks, and Snowflake.
- Design solutions aligned with data lake or lakehouse architecture.
- Leverage modern cloud platforms (AWS, Azure, or GCP).

Quality & Optimization

- Implement data validation, testing, and performance tuning to ensure data integrity.
- Optimize data storage and processing in cloud environments.

Documentation & Knowledge Sharing

- Create clear and comprehensive technical documentation.
- Contribute to internal knowledge-sharing initiatives, such as community tech talks.

Candidate Requirements

- Proven experience in data engineering, with exposure to BI or MLOps.
- Strong working knowledge of cloud platforms (AWS, Azure, or GCP).
- Experience with tools such as Databricks, Snowflake, or DataVault.
- Proficiency in Python and SQL; experience with Spark is highly valued.
- Solid understanding of data warehousing and modern data stack concepts.
- Strong communication skills and a proactive, solution-oriented mindset.

What's On Offer

- A chance to be part of a **global tech organization** focused on innovation.
- **Hybrid work model** with flexibility to work remotely.
- Additional medical insurance (includes gym membership), team-building activities, and outreach programs.
- Ergonomic and modern workspaces when in-office.

- Ongoing learning and development opportunities, including access to **Udemy** and more.
