Aprašymas

Role Overview:

We are seeking a **Senior Java Developer** to join a cross-border engineering team focused on building and evolving enterprise-grade backend systems within the **banking** domain. This role involves hands-on development of **cloud-native** solutions, leveraging **Java 17+ / Java 21, Spring Boot 3+**, and **microservices architecture**. You will contribute to designing scalable and secure **RESTful APIs**, working within **distributed systems** and **AWS cloud** environments, while influencing technical decisions and platform evolution.

Key Responsibilities:

- Design, develop, and maintain backend services using **Java 17+ / Java 21** and **Spring Boot 3+**
- Build and integrate **RESTful APIs** for scalable and secure services
- Develop and maintain **microservices architecture** in **cloud-native** environments
- Implement event-driven solutions using **Apache Kafka** and low-latency messaging patterns
- Collaborate with teams to ensure high-quality code, **clean code principles**, and **automated testing**
- Contribute to **CI/CD pipelines** and infrastructure using **Terraform, ArgoCD**, and **EKS**
- Monitor and optimize applications using **AWS**

services such as **API Gateway** and **CloudWatch**

Must-Have Requirements:

- Strong experience with **Java 17+ / Java 21**
- Hands-on experience with **Spring Boot 3+**
- Proven expertise in **RESTful API** design and integration
- Experience with **Apache Kafka** and event-driven architectures
- Solid understanding of **cloud platforms**, preferably **AWS**
- Experience working with **distributed systems**
- Familiarity with **CI/CD practices** and tools like **Terraform, ArgoCD, and EKS**
- Strong commitment to **clean code** and **automated testing**
- Fluency in spoken and written **English**

Nice to Have:

- Experience in **banking, financial services, or regulated environments**
- Familiarity with **Quarkus**

Required Skills
