€5300 - 6700/Month

Duration

Mid-term project (>6 months)

Extension (project)

Yes

Remotely (optionally)

Yes

Expire On

2026-07-31 (1 month from now)

Description

We are looking for a **Senior QA Automation / Manual Tester** with a proven background in **fintech, banking**, or payment platforms. The role centers on validating **SEPA, SWIFT**, and **Visa** payment flows, including **ISO 20022** messaging, **3DS2** authentication, and **PCI DSS Level 1** compliance controls. The consultant will work across **microservice** and **API** layers, covering end-to-end transaction lifecycle testing, resilience validation, and audit-ready documentation within a complex, regulated payment environment.

Key Responsibilities:

- Test **SEPA** credit transfer flows, **SWIFT MT / ISO 20022** message flows, and **Visa** card payment flows including **3DS2** authentication.
- Perform **API**, contract, schema, and integration testing at the **microservice** layer, including **async/event-driven** workflow testing across queues, retries, and **DLQ**.
- Execute structured test scenarios across **SEPA, SWIFT**, and **Visa** payment workstreams and validate end-to-end transaction lifecycle flows, reconciliation, settlement, and data consistency.
- Conduct resilience testing including **retries, circuit breakers, DLQ**, failover, and **idempotency** validation, as well as performance, load, and stress testing for platform stability.

- Develop, execute, and integrate automated test suites into **CI/CD** pipelines.
- Produce audit-grade test evidence and traceability documentation for **PCI DSS** compliance.
- Validate web, mobile, and cross-platform functional consistency and regression coverage.
- Collaborate with developers, **DevOps**, and security teams to identify, track, and verify defect resolution.

Must-Have Requirements:

- **5+ years** of QA automation experience, with a minimum of **3+ years** in **fintech, banking**, or payment platforms.
- Strong experience in **API testing** and **microservice** integration testing using **Postman, REST Assured**, or similar tools.
- Proficiency in **Java, JavaScript**, or **Python** for automation scripting and test development.
- Hands-on experience with automation frameworks such as **Selenium, Cypress**, or **Playwright**.
- Experience integrating automated tests into **CI/CD** pipelines using **Jenkins, GitHub Actions**, or equivalent tools.
- Hands-on experience testing **SEPA, SWIFT**, and **Visa** card payment flows, including **ISO 20022** messaging.
- Solid understanding of **PCI DSS** compliance controls, **OWASP** security concepts, authentication, and encryption validation.
- Familiarity with **AWS** environments, including **CloudWatch** logging, monitoring, and observability validation.
- Strong understanding of resilience testing concepts including **retries**, failover, **circuit breakers, DLQ**, and **idempotency**.
- Experience producing structured, audit-ready QA documentation and test traceability evidence.

Duration: 6-9 months.
