Strong JavaScript Developer with HTML5, React.js and Node.js skills for an IoT project for a German automotive company

Quantitec

intranav.com/

Frankfurt, Germany

This assignment expired :when

Description:

Project: Creation of a, web-based, cross-platform, interactive visualization dash board for KPIs overview. Client is one of the largest automotive clients in the world.

Our company: Quantitec provides the digitization solution IntraNav which enables its clients to make locations and movements of vehicles, goods and people in intralogistics environments transparent based on a precise self-developed indoor-localisation technology and a sophisticated IoT software platform. Consequently, IntraNav is a basis for applications such as real time process monitoring, process optimization and autonomous indoor driving. The IntraNav system is being used by a wide range of blue chip companies as part of their digitalization strategy. In 2016 the IntraNav system won the Microsoft Indoor Localization competition as the most accurate indoor-localization system.
