Personal Statement

Looking for thought-provoking, engaging and well-paid work opportunities.

- Ambitious developer seeking for a challenge.
- Enjoys working with the newest technologies.
- Work place == a change to further advance the current skill set.
- Definitely not a conservative person.
- Age != knowledge && skills.
- Started programming career very early of age (Got my first computer at the age of 6 y.o, have been a techie ever since)
- Experienced in low-level programming, capable of creating frameworks and more instead of just being a consumer.
- Experienced in de-mangling of many different varieties of spaghetti and overall messy code
- Free time involves working on a React Native project (custom Facebook login flow, Node.JS backend with Express, MongoDB).

Some basic examples of my code:
