Description

New opportunity for Freelance IT Software Engineer (.NET).

About Danske Group IT:

It is a part of an organization, which delivers world-class digital financial solutions to customers. They understand that the current change is Technology-driven, and we prioritize IT as a key component for success in our journey to drive digital disruption in the bank. Their teams work with complex tech challenges and develop Danske Bank's global competitive edge on innovative digital solutions. Teams are driven by job content, share ownership of strategic services, own service strategy, and lead improvement. One more important feature is that senior leadership is present on-site.

Responsibilities:

You will be part of the team designing new interface to expose accounting data from multiple data sources to diverse group of users from multiple data sources to diverse group of consumers via API's designed together with an Architect and the team. The new interface will

act as a steppingstone to exit legacy on-premises system before users are moved to a new Accounting system developed using .NET on AWS (Amazon Web Services) Cloud and SQL elements involving complex data integrations and calculations. You will join other .NET developers, BI Engineers, DevOps specialists, IT System analysts, and Business analysts – all working in cross-functional squads to deliver modern technology solutions across all financial domains.

You will:

- Design and develop software that is trusted, testable, easily maintainable, and resilient.
- Work with .NET, MS SQL, Azure DevOps, JIRA, AWS, etc.
- Closely collaborate with business users and different teams inside the bank.
- Improve the way we do things.
- Be agile and spread these ideas among the team.

Requirements:

About you:

- 5+ years of experience
- In-depth knowledge of different API types - REST, SOAP, XML, gRPC, GraphQL and similar
- Practical experience with frontend frameworks (React preferably, Angular, or etc.)
- Experience with correct API versioning strategies
- Experience creating, organizing, and managing huge API systems (50-100+ API endpoints per project)
- Vast experience in C# with .NET Framework, .NET Core or newer
- MS SQL or similar relational database
- Experience with public cloud providers like AWS, Azure or Google Cloud is a requirement.
- Automated testing (Unit, Integration)
- RESTful architecture
- GIT • Experience with microservices, event-driven design systems
- Ability to maintain and use DevOps pipelines, created by professionals.

- Advanced English language skills

Additional great to have:

- Be familiar with message queueing or streaming systems (for ex. RabbitMQ, Kafka)
- Knowledge in using build and deployment pipelines for cloud services using TFS/Azure Devops, Docker, Kubernetes, or other technologies.
- Good understanding of development lifecycle process and agile practices
- Current technology stack, which you will influence moving further is .NET C#, Azure DevOps, AWS, GIT, Containerization, SonarQube, MS SQL Server data platform.

Years of experience: 5+

Company offers:

- An inspiring environment in a large IT organization
- Work in an international team, which concentrates on innovative business-facing solutions
- An extensive training program to ensure that your skills are maintained and updated on an ongoing basis.
