Aprašymas:

Our customer is expanding its team within backend development to accelerate development of a new innovative platform for the construction industry. The solution covers 3D-visualization, automation solutions and system integration for the construction industry.

As a backend developer you will be part of a cross functional team consisting of highly skilled developers and engineers within software development, civil engineering and data analytics. It is a chance to be part of a skilled team with high ambitions to develop a cloud solution and create a successful international company.

We're a company with high ambitions, both in terms of growth and positive impact on the world around us and encourage our developers to be the same.

We are looking for a passionate software engineer who enjoys building innovative applications using modern technologies, and with the ability to understand 3D-modelling software used in the construction industry. It will include both DevOps and backend development on the existing development stack including Node JS and React JS running on AWS.

We expect you to have skills or experience in:

- Node JS
- DB-PostgreSQL
- Core Java
- General AWS platform

- General Infrastructure
- React JS
- Elastic Search
- Web services Administration

Reikalinga Patirtis

JAVASCRIPT
Node.js 2-3 metai
