Personal Statement

I started my IT carrier in the end of second year of university. It was medium size national IT Company. Our focus was ERP system for small and medium corporates.

I started as report developer and database specialist. In year or two, I have been certified for Navision (now Microsoft Dynamics). With this my personal achievement, my employer establish new service for his customers. It was Navision development and database migration solution.

Several years later, I moved to .Net development with focus on mobile solution for retail business area. It was challenging task to me. Not only because of technology. With this step we went to new unknown market.

At this position, I was responsible for development and architecture of mobile ERP solution. This year we gain first customer and it was very successful start. We were one of first and leading companies in this sector.

Few years later, I receive new great opportunity to create a small warehouse solution for our ERP system. It was great start too and our company was strong competitor in market for small warehouses.

In total, I spend 10 years with my first employer and I can say that it was fantastic years together.

At same time I got great opportunity to join Swedbank and take a part building Swedbank Competence Center in Lithuania. I started in small group of 3 people and we began to grow our competence in Swedish payments and clearing department.

We were one of the first who join Swedbank Competence Center and in two years our group grown up to 15 people in Vilnius with great competence in payments and clearing area.

I have focus to International payment area with underlying infrastructure. My role includes service maintenance and new feature development. I and my team mates are highly involved in internal projects with different roles and assignments in scope of those projects.

At the same time, being proactive, I was one of the activists to open Swedbank IT Academy. It is responsible to grow new talents in IT testing and development areas. And we proud that many brilliant students are joining Swedbank later. I glad to be part of Academy and enable young people to grow.

In parallel with Swedbank IT Academy, I have great opportunity to be a reviewer in University of Applied Sciences for student bachelor's degree. With this my public initiative I hope to be part of growing IT community in Lithuania.
