Personal Statement

As part of my current role, I am required to maintain the Oracle E-Business Suite, which involves ordering system changes, communicating with suppliers in coordinating system specifics, testing changes, and consulting end users. I am also responsible for maintaining documentation for the integration of administration systems with the Oracle E-Business Suite. I am familiar with functional specification documentation (MD50 and MD70).

Furthermore, I successfully completed computer programming courses at Vilnius University, where I was trained in Pascal, C++, and Java. During this time, I also became familiar with Structured Query Language (SQL).

Through my experiences, I have come to realise a natural aptitude for quality assurance. I prefer things to be correct. I naturally seek to resolve issues, and help others resolve theirs.

Skill Stack

PROGRAMMING	DATA BASE
