Personal Statement

I am a QA tester at "DnB Bank" IT department in Vilnius, Lithuania. I am a man with high interest in IT, as I was for quite some time. My way to IT field started with me being chosen as one of 10 people, who are passionate about IT, to participate in a starting IT career "FIT4JOBS" IT System Testing Basics course program organized by "Langas i ateiti" organisation. In these courses i have learned various software testing methods, using various software tools. After courses i started working as a QA Intern at "Swedbank", where I was testing various bank system operations, transactions and systems itself. It was my starting point for starting my career in IT.

I am now working as a QA tester at "DnB Bank". I started as a QA tester in "SEPA" project. This was a big project, which involved testing in many various banking processes, applications, modules and systems. During this time I managed to learn great deal and to deepen my knowledge in banking IT systems, skills as a QA tester. I am always a part of a team at "DnB", but i also have to make my input as an individual, so both teamworking and handling individual responsibilities are essential. My main responsibility has become test automation for E-Banking system. Test automation is really changeling, but I decided it is the course I want to take in IT where I can grow and develop myself. Of

course I continue to grow as QA tester and overall in IT field everyday, as i work here.
