Personal Statement

While working as a software engineer, I have often been wanting to improve the communication and development
processes. At every project iteration I would be wondering how can/could these step be done more efficiently for me/for
my colleagues/for our customers. Being a product owner I can facilitate both customers and teams to work together
into building the best features and product. I am a strong technical leader with great analytical skills. This enable me to adapt quickly to new settings and technologies.I believe that with theses I could be a beneficial team player.

Early on I have been interested in having a better understanding of innovation and its business challenges.While still studying, I joined the university consulting company USEC. During this one year working as a project manager in a dynamic team, I have been working directly with customers to identify and specify their needs, propose
technical solutions and coach the teams until the full delivery of the solution.

I have successfully been working in the US for two major tech companies. I have developped strong experience in software development.

I am looking forward to discuss opportunities with you.

Best regards,

Camille Boillet
