Aprašymas:

Danske Bank Group IT Lithuania (DGITL) is a part of an organization, which delivers world-class digital financial solutions to customers. DGITL is newly established IT site operating from the end of 2014 but it is already the fastest growing IT organization in Lithuanian market. We have an understanding that the current change is Technology-driven, and we prioritize IT as a key component for success in our journey to drive digital disruption in the bank.

DGITL teams work with simplifying complexity and tech challenges in developing Danske Bank's global competitive edge on innovative digital solutions. Teams are driven by job content, share ownership of strategic services, own service strategy and lead improvement. One more important feature – senior leadership is present on site.

Project description

You will become part of the core IT team in Group Finance Solutions, where your role will be to design, build, and deploy for high performance, reliability and scalability. You will understand how the end-to-end stack works and will work closely together with IT team's lead architects, back-end software engineers

and business analysts.

As part of large scale new system development initiative, you will build sustainable interfaces like APIs to provide data about a range of financial products. Today the financial data is provided in datasets on mainframe and you will build software to transfer, parse and expose the data via the sustainable inbound interfaces as a key part of the new system.

Role Responsibilities

· Take a role in our journey to build industry leading cloud based accounting solutions using modern tools and technologies

· Working together with other developers and lead architects – in the backend and its interfaces including APIs using C# and Microsoft tools

· Use your knowledge to implement and follow that we have the best setup on CI/CD and integrations to a variety of modern tools and systems

· Participate in developing and running software in a DevOps setup within strong teams using agile working principles

· Have direct impact on how we design and build our solutions to meet architectural principles and system ambitions

· Working closely with other developers throughout the organisation to ensure development is in par with development guidelines and best practices

· Managing personal time in the best manner and taking responsibility for technical decisions aligned to overall architectural ambitions

· Staying pro-active in learning new skills and industry best practices to position our solutions as top-quartile in the business

· Enjoy and sustain an informal and pleasant working environment

Requirements

· 4 yrs. of experience in development of distributed enterprise systems in C# on .Net

· Experience implementing microservice architecture would be a great advantage

· Experience designing and building Rest APIs and file parsing

· Knowledge in using build and deployment pipelines for cloud services using TFS/Azure Devops, Docker, Kubernetes and other technologies

· Experience with automated testing e.g. using NUnit, Moq and SonarQube.

· Good knowledge of Microsoft SQL Server data platform, data processing integration architecture and database solutions is an advantage

· Good understanding of development lifecycle process and agile practices

· Good communication skills in English – both written and verbal

Our current technology stack, which you will influence moving further:

· C#

· Azure DevOps, Openshift, GIT, SonarCube, …

· MS SQL Server entire tool stack

· IBM Infosphere DataStage

We Offer

· An inspiring environment in a large IT organization

· Responsibility in a growing IT organization facing the challenge and the opportunity to influence and shape our team in Vilnius

· Work in an international team, which concentrates on innovative business facing solutions
