Duration

Long-term project (>12 months)

Extension (project)

No

Remotely (optionally)

No

Expire On

2020-09-30 *(3 days ago)*

Description:

Main responsibilities

- Research, evaluate, architect and deploy new tools, frameworks, and patterns to build sustainable software solutions for our clients
- Stay on top with latest technologies
- Share knowledge and know-how of software best practices inside and outside the team
- Evaluate tools, frameworks, platforms and processes to determine the best fit for new projects.
- Lead and work as part of a team, as well as independently work toward assigned goals.

Requirements

Our teams are technology agnostic, always aiming for the latest. We often use a combination of below in our projects:

- Back End: JAVA, sometimes Node.js
- Frameworks: Spring / Spring Boot, Hibernate, MyBatis ORM
- Tools: Atlassian stack, IntelliJ
- CI / CD: Jenkins, TeamCity
- Source Repositories: Bitbucket, GitLab
- Hosted on: AWS, Google Cloud, Azure, OpenShift
- Databases: Relational and/or NoSQL. We use Flyway or Liquibase for schema versioning.
- Other fun stuff: Docker / k8s, ElasticSearch, SOLR,

Message brokers

In addition to the right tools, we also encourage teams to follow high personal code/development standards and agile practices (scrum).

We actively do:

- Code reviews
- Automated testing (unit, integration, e2e)
- Quality control: SonarQube, Checkmarx, FindBugs

Benefits

- A digital products focused company with a variety of challenging engagements with upper mid-market and Fortune organizations
- A chance to work with the top talent professionals and award winning teams across different countries
- Competitive salary and performance based bonuses
- Private health insurance
- Sponsored participation in professional improvement events
- Trips to our other offices and clients' sites
- Great team building events
- Sports activities including gym benefit
- Employee referral program

Required Skills

JAVA
Java 8 3-4 years
Spring 3-4 years
